

## Contents

<b>Streszczenie</b> .....	9
<b>Summary</b> .....	11
<b>Notations and abbreviations</b> .....	13
<b>1. Introduction</b> .....	17
<b>2. Tensor methods in computer vision</b> .....	21
2.1. Introduction .....	21
2.2. Tensor – a mathematical object .....	22
2.2.1. Main properties of linear spaces .....	23
2.2.2. Concept of a tensor .....	23
2.2.3. Basic properties of tensors .....	25
2.3. Tensor – a data object.....	26
2.4. Derivation of the structural tensor .....	27
2.4.1. Structural tensor in two-dimensional space .....	29
2.4.2. Structural tensor in higher-dimensions .....	31
2.4.3. Multi-channel and scale-space structural tensor .....	33
2.4.4. Extended structural tensor.....	35
2.5. Tensor-driven diffusion .....	35
2.6. Object representation with tensor of inertia.....	37
2.7. Eigen-decomposition and representation of tensors .....	39
2.8. Tensor invariants .....	43
2.9. Filtering of tensor fields.....	44
2.9.1. Order statistic filtering of tensor data.....	44
2.10. Multi-focal tensors.....	47
2.11. Multilinear tensor methods .....	50
2.11.1. Basic concepts of the multilinear algebra .....	52
2.11.2. Higher-order singular value decomposition .....	59
2.11.3. Computation of the HOSVD .....	61
2.11.4. Best rank-one and rank-( $R_1, R_2, \dots, R_p$ ) approximations .....	64
2.11.5. Factorization of nonnegative tensors .....	66
2.11.6. Multilinear image processing .....	67

<b>3. Classification methods and algorithms</b> .....	69
3.1. Introduction .....	69
3.2. Statistical formulation of the object recognition .....	69
3.2.1. Parametric and nonparametric methods .....	69
3.2.2. Maximum likelihood recognition .....	70
3.2.3. Bayes framework .....	71
3.2.4. Maximum a posteriori classification scheme .....	71
3.2.5. Binary classification problem .....	72
3.3. Parametric methods – mixture of Gaussians .....	73
3.4. Non-parametric methods .....	78
3.4.1. Histogram based techniques .....	78
3.4.2. Parzen method .....	84
3.4.2.1. Kernel based methods .....	85
3.4.2.2. Nearest-neighbor method .....	87
3.5. Probabilistic neural network .....	88
3.6. Hamming neural network .....	89
3.7. Morphological neural network .....	92
3.8. The mean shift method .....	95
3.8.1. Method specification .....	95
3.8.2. Continuously adaptive mean shift method .....	100
3.8.3. Algorithmic aspects of the mean shift tracking .....	102
3.8.3.1. Tracking of multiple features .....	102
3.8.3.2. Tracking of multiple objects .....	103
3.8.3.3. Fuzzy approach to the <i>CamShift</i> .....	104
3.8.3.4. Discrimination with background information .....	104
3.8.3.5. Adaptive update of the classifiers .....	105
3.9. Support vector domain description .....	106
3.9.1. Kernels for object classification .....	111
<b>4. Detection and tracking</b> .....	114
4.1. Introduction .....	114
4.2. Direct pixel classification .....	114
4.2.1. CASE STUDY – Human skin detection .....	115
4.2.2. CASE STUDY – Pixel based road signs detection .....	119
4.2.2.1. Fuzzy approach .....	119
4.2.2.2. SVM based approach .....	123
4.3. Detection of basic shapes .....	127
4.3.1. Detection of line segments .....	129
4.3.2. Up-Write detection of convex shapes .....	130
4.4. Figure Detection .....	132
4.4.1. Detection of regular shapes from salient points .....	133
4.4.2. Clusterization of the salient points .....	136
4.4.3. The adaptive window growing method .....	137
4.4.4. Figure verification .....	138
4.4.5. CASE STUDY – Road signs detection system .....	140

4.5. Object tracking .....	146
4.5.1. CASE STUDY – Road signs tracking and classification.....	146
4.5.2. CASE STUDY – General framework for object tracking.....	150
<b>5. Recognition.....</b>	<b>157</b>
5.1. Introduction .....	157
5.2. Recognition from tensor phase histograms and morphological scale .....	157
5.2.1. Computation of the phase histograms in MSS .....	159
5.2.2. Matching of the phase histograms.....	161
5.2.3. CASE STUDY – Recognition of real objects with tensor histograms .....	163
5.3. Template matching .....	169
5.4. Recognition in the log-polar and Gaussian scale spaces.....	173
5.5. Invariant based recognition.....	178
5.5.1. CASE STUDY – Pictogram recognition with affine moment invariants.....	178
5.6. Recognition in the domain of deformable models .....	182
5.6.1. CASE STUDY – Road signs recognition with deformable models.....	183
5.7. Ensembles of classifiers.....	188
5.7.1. CASE STUDY – Mixture of expert classifiers for signs recognition .....	191
5.7.2. The arbitration unit .....	193
5.8. Computer vision systems .....	193
5.8.1. CASE STUDY – Road signs recognition system .....	194
5.8.1.1. Problem analysis.....	195
5.8.1.2. Architecture of the system.....	196
5.8.1.3. Activity of the system.....	196
<b>6. Closure.....</b>	<b>199</b>
<b>7. Appendix.....</b>	<b>201</b>
7.1. Morphological scale-space .....	201
7.2. Morphological tensor operators .....	203
7.3. Geometry of quadratic forms.....	204
7.4. Testing classifiers .....	205
