

Contents

1. Introduction	7
2. Efficiency and risk of investment projects	10
2.1. Efficiency of investment projects	10
2.2. Risk of investment projects	14
2.3. Risk assessment methods of investment projects	15
2.3.1. Descriptive method	16
2.3.2. Expert evaluation method	16
2.3.3. Sensitivity analysis	16
2.3.4. Efficiency correction methods	17
2.3.5. Method of marginal payback period	17
2.3.6. Analog (discrete) method	18
2.3.7. Operational methods	18
2.3.8. Scenario analysis	18
2.3.9. Statistical and probabilistic methods	18
2.3.10. Method of the loss expected value	19
2.3.11. Analysis of decision trees	19
2.3.12. Methods of computer simulation	19
2.4. Measures of investment projects risks	20
2.5. Hybrid data in the risk assessment of investment projects	21
3. Chosen problems of fuzzy set theory and Dempster–Shafer theory of evidence	25
3.1. Definition of fuzzy sets	25
3.2. Operations on fuzzy sets	25
3.2.1. Set intersection operation	26
3.2.2. Disjunction operation	28
3.2.3. Fuzzy relations	29
3.2.4. Fuzzy implication	34
3.3. Definition of a fuzzy number	38
3.4. Arithmetic operations on fuzzy numbers	41
3.5. Possibility and credibility distributions, fuzzy variables	44

3.6. Fuzzy and interval regression	46
3.7. Simulation of fuzzy systems	49
3.8. Dempster–Shafer (D–S) theory of evidence	49
3.9. Fuzzy random variables	52
4. New methods of processing hybrid correlated data	54
4.1. Using simulation of fuzzy systems for execution of arithmetic operations on interactive fuzzy numbers	54
4.2. Using non-linear programming for execution of arithmetic operations on interactive fuzzy numbers	56
4.3. Hybrid propagation method	57
4.4. Methods of data processing – numerical examples	58
4.4.1. Description of the example problem	58
4.4.2. Data and results of calculations	61
4.4.3. A summary of the results of calculations	68
4.5. Calculation of net present value – different approaches	69
4.5.1. Description of the problem of the calculation of net present value	69
4.5.2. Data and results of calculations	70
4.6. A summary of the results of calculations	75
5. Multi-criteria decision making methods	77
5.1. Multi-criteria decision making methods in the investment projects evaluation	77
5.2. Fundamentals of multi-criteria decision making methods approach	79
5.3. Analytic hierarchy process method	79
5.3.1. Defining the unstructured problem	80
5.3.2. Hierarchical decomposition of the decision	80
5.3.3. Pairwise comparisons	81
5.3.4. Pairwise matrix evaluation	83
5.3.5. Additive weighted aggregation of priorities	88
5.3.6. Evaluation of rating inconsistency	88
5.4. Fuzzy analytical hierarchy process	89
5.4.1. Fuzzy extent analysis	90
5.4.2. Fuzzy analytical hierarchy process – numerical example	92
5.5. Technique for order of preference by similarity to ideal solution method	97
5.5.1. Technique for order of preference by similarity to ideal solution method for real and interval data	98
5.5.2. Fuzzy technique for order of preference by similarity to ideal solution	101
5.5.3. Fuzzy technique for order of preference by similarity to ideal solution – numerical example	104

6. Rule-based systems in multi-criterion evaluation	108
6.1. Fuzzy reasoning principles	108
6.2. Mamdani's fuzzy inference method	114
6.3. Fuzzy reasoning with Takagi–Sugeno models	123
6.4. Fuzzy reasoning on relational models	130
6.5. Modified evidential reasoning approach	133
7. Multi-criterion evaluation of projects of the metallurgic enterprises using selected methods	152
7.1. Projects evaluation using fuzzy analytic hierarchy process	154
7.2. Evaluation of chosen projects using fuzzy technique for order of preference by similarity to ideal solution	155
7.3. Evaluation of chosen projects using Mamdani's fuzzy inference method	157
7.4. Evaluation of chosen projects using Takagi–Sugeno model	162
7.5. Evaluation of chosen projects using modified evidential reasoning approach	164
7.6. Summary of evaluation of projects using different method	168
8. Summary and concluding remarks	169
