Table of contents

Summary . . . 9
Streszczenie . . . 10
Index of important symbols . . . 11

1 Introduction . . . 13

2 State-of-the-art . . . 16
2.1 Graph grammars . . . 16
2.2 Graph grammar models of adaptive computations . . . 17
2.3 Frontal and multifrontal solver algorithms . . . 18
2.4 Orderings and elimination trees . . . 18
2.5 Graph grammar models of multifrontal solver algorithms . . . 19

3 Preliminaries . . . 20
3.1 Basic definitions towards composition programmable graph grammar systems . . . 20
3.1.1 Composition graphs . . . 20
3.1.2 Composition graph grammar . . . 22
3.2 Three-dimensional adaptive finite element methods . . . 29

4 Modeling three-dimensional adaptive finite element method by graph grammar . . . 37
4.1 Graph grammar productions for generation of the initial mesh with tetrahedral elements . . . 37
4.2 Graph grammar productions interfacing with the solver algorithm with tetrahedral elements . . . 47
4.3 Graph grammar productions selecting optimal refinements with tetrahedral elements . . . 51
4.4 Graph grammar productions performing optimal refinements with tetrahedral elements . . . 52
4.5 Formal definitions of graph grammar system modeling adaptive finite element method with tetrahedral elements . . . 64
4.6 Extension of the graph grammar model for three-dimensional hexahedral finite elements . . . 75

5 The utilization of graph grammar system for adaptive finite element method computations **80**
5.1 Guarantee of the correctness of the mesh 80
5.2 Guarantee on the correctness of the adaptation process 83
5.3 Possibility of construction of new orderings 83
5.4 Reutilization of LU factorizations over unrefined parts of the mesh 102

6 Application of the hierarchical chromosome-based genetic algorithm for finding of quasi-optimal initial grids for three-dimensional adaptive finite element method **117**
6.1 The hp-adaptive Finite Element Method Algorithm 117
6.2 Application of hierarchical chromosome-based genetic algorithm for initial mesh selection 120
6.3 Numerical verification of the HCBGA algorithm 125

7 Numerical results **129**
7.1 The case study for the graph grammar modeling three-dimensional adaptive projection problem 129
7.2 The case study for the graph grammar modeling three-dimensional hp-adaptive finite element method with hexahedral elements 131
7.3 The case study for the graph grammar modeling three-dimensional h-adaptive finite element method with tetrahedral, prism and pyramid elements 140
7.3.1 Graph grammar productions expressing the mesh generation algorithm 140
7.3.2 Graph grammar productions expressing the mesh refinements algorithm 146
7.3.3 Graph grammar productions interfacing with the multifrontal direct solver 148

8 Conclusions and future work **152**
8.1 Conclucions 152
8.2 Current and future work 154

Appendix A **159**

Appendix B **165**

Bibliography **169**
