Abstract 7
Streszczenie 9
Preface 11
1. Introduction 19
1.1. Modeling Complex Systems 20
1.2. Simulation as scientific method 22
1.3. Cellular Automata 22
1.4. Cellular Automata: extensible modeling and simulation tool 25
1.5. Cellular Automata as flexible and efficient modeling framework 38
2. Cellular Automota for natural phenomena 39
2.1. Anastomosing river systems 40
2.2. Cellular Automata model of anastomosing river 42
2.3. Multi-scale phenomenon of anastomosing river 45
3. High performance simulations with Cellular Automata approach 47
3.1. Cellular Automata models on cluster platforms 48
3.2. Accelerating Cellular Automata models with GPU 50
3.3. Large-scale simulations with Cellular Automata models on GPU 62
3.4. Summary on applying GPU computations for Cellular Automata models 68
4. Cellular Automata applied for multiscale phenomena 69
4.1. Model of Anastomosing river with Graph of Cellular Automata 71
4.2. Model of tumor-induced angiogenesis 76
4.3. Model of *Fusarium graminearum* 88
4.4. Summary of using Graph of Cellular Automata models 96

5. Cellular Automata as an environment for agents 97
5.1. Agents and agent-based systems..... 97
5.2. Evolving agents in Cellular Automata environment..... 104
5.3. On efficiency of Cellular Automata with Agents and Agents with Cellular Automata..... 117
6. Summary..... 119
Bibliography 121
