Streszczenie	7
Summary	13
Selected meaning	15
Selected abbreviation	19
Foreword	21
1. Preface	23
1.1. Introduction	23
1.2. Origin of the publication	24
1.3. Contents summary	27
2. State of knowledge and technology	32
2.1. Production systems and the results of their evolution	32
2.2. Selected problems concerning building and exploitation of overhead travelling cranes	36
2.3. Conclusions	44
3. Integrated system for device's exploitation process control improvement	47
3.1. Human centred approach	47
3.2. Functional model of device's exploitation system	48
3.3. The C-OT-O set exploitation process control	52
3.4. Reliability shaping of C-OT set	55
4. Shaping system of device exploitation parameters	58
4.1. Model of the system	58
4.2. Performance and control of device characteristic	63
4.3. Exploitation parameters and their influence on device's characteristic	68
4.4. Device's technical state and its evaluation	73
4.5. Final remarks	77

5. The selected quality measures of the device	79
5.1. The requirements of modern devices	79
5.2. Device's safety and its model	80
5.3. Device's reliability – operation strategy designing	83
5.4. The rules of selecting the exploitation parameters	87
6. Exploitation reliability of the device	93
6.1. Model of device's reliability changes	93
6.2. Dynamic characteristic of device's reliability	95
6.3. Dynamic characteristic of modernized device reliability	100
6.4. Supervision model of device exploitation reliability	102
7. Integrated exploitation investigation of a device	106
7.1. Quality undertakes directed to the user	106
7.2. Activity stages in device investigation	108
7.3. WSUT type device models	113
7.4. Rapid investigation method of WSUT type device	119
7.5. Application example	122
8. Device quality ventures effectiveness evaluation	130
8.1. Evaluation of device exploitation quality	130
8.2. Efficiency of exploitation undertakings	133
8.3. Algorithm for determining indispensable sets of maintenance	137
8.4. Crane optimisation through modernisation	141
8.5. Methods supporting ventures effectiveness	145
8.6. Technical evaluation of exploited overhead travelling crane	148
9. Man-machine interface in crane operation	153
9.1. Interfaces for control and fault diagnosis	153
9.2. Decision making interface	157
9.3. Safety supervision system of device	161
10. Integrated active knowledge in transportation systems	165
10.1. Introduction	165
10.2. Enterprise architecture	166
10.3. Transport active knowledge model	169
10.4. Telematics application example	174
10.5. Computer aided control examples for transport devices	177
11. Final remarks	185
References	187
