<b>Preface</b> . . . . .	ix
<b>Introduction</b> . . . . .	1
<b>1. Infinite Systems of Nonlinear Parabolic Differential-Functional Inequalities</b> . . . . .	9
1.1. Notations, definitions and assumptions . . . . .	9
1.1.1. Sets and domains . . . . .	9
1.1.2. Fundamental spaces . . . . .	10
1.1.3. Cones and order . . . . .	12
1.2. Ellipticity and parabolicity . . . . .	13
1.3. Comparison theorems . . . . .	16
1.4. Weak inequalities for infinite parabolic systems . . . . .	20
1.5. Strong inequalities for infinite parabolic systems . . . . .	21
1.5.1. Remarks on the history of strong inequalities . . . . .	21
1.5.2. Theorem on strong differential-functional inequalities . . . . .	22
1.5.3. Generalizations . . . . .	24
<b>2. Fundamental Monotone Iterative Methods</b> . . . . .	27
2.1. Notations, definitions and assumptions . . . . .	27
2.1.1. Hölder spaces . . . . .	27
2.1.2. Notations of functional dependence; initial-boundary conditions . . . . .	29
2.1.3. Fundamental assumptions . . . . .	31
2.1.4. Interrelations between conditions . . . . .	36
2.1.5. Upper and lower solutions . . . . .	38
2.2. Method of direct iterations . . . . .	39
2.3. Chaplygin method . . . . .	48
2.4. Certain variants of Chaplygin method . . . . .	53
2.5. Certain variant of monotone iterative method (Ważewski method) . . . . .	55
2.6. Another variant of monotone iterative method (Mlak-Olech method) . . . . .	57
2.7. Method of direct iterations in unbounded domains . . . . .	60
<b>3. Truncation Method for Infinite Countable Parabolic Systems</b> . . . . .	71
3.1. Introduction . . . . .	71

3.2.	Methods of construction of shortcut systems . . . . .	72
3.3.	On the existence and monotonicity of approximation sequences . . . . .	75
3.4.	Theorem on the approximation . . . . .	78
3.5.	Theorem on existence of regular solutions . . . . .	81
<b>4.</b>	<b>Remarks on Monotone Iterative Methods . . . . .</b>	<b>83</b>
4.1.	Some remarks in connection with applications of numerical methods . . . . .	83
4.2.	On constructions of upper and lower solutions . . . . .	86
4.2.1.	Fundamental example . . . . .	86
4.2.2.	Other examples . . . . .	88
4.3.	Positive solutions . . . . .	89
4.4.	Estimation of convergence speed for different methods . . . . .	90
4.5.	Extension of monotone iterative methods to more general equations . . . . .	92
4.5.1.	Strongly coupled systems . . . . .	92
4.5.2.	Examples of important finite and infinite systems . . . . .	93
4.5.3.	Extension of the method of upper and lower solutions to more general equations . . . . .	96
<b>5.</b>	<b>Fixed Point Method for Infinite Parabolic Systems . . . . .</b>	<b>97</b>
5.1.	Introduction . . . . .	97
5.2.	Theorems on the existence of solutions . . . . .	99
<b>6.</b>	<b>Stability of Solutions of Infinite Parabolic Systems . . . . .</b>	<b>111</b>
6.1.	Introduction . . . . .	111
6.2.	Definitions and assumptions . . . . .	113
6.2.1.	Fundamental spaces . . . . .	113
6.2.2.	Weak solutions of elliptic and parabolic problems . . . . .	116
6.3.	Existence of solutions of Dirichlet problem for infinite elliptic systems . . . . .	117
6.4.	Stability of solutions of infinite parabolic systems . . . . .	127
	<b>Notes and Comments . . . . .</b>	<b>135</b>
	<b>Appendix . . . . .</b>	<b>137</b>
A.1.	Existence and uniqueness theorems for parabolic linear equations . . . . .	137
A.2.	Integral representations of the solutions of the first initial-boundary problem . . . . .	139
A.3.	Weak C-solution. Integral transformation . . . . .	142
A.4.	Existence and uniqueness theorems for elliptic linear equations . . . . .	143
A.5.	Fundamental fixed point theorems . . . . .	144
A.6.	Fundamental imbedding theorems . . . . .	145
A.7.	Theorems on weak parabolic inequalities . . . . .	147
	<b>Bibliography . . . . .</b>	<b>151</b>
	<b>List of used symbols for approximation sequences . . . . .</b>	<b>163</b>
	<b>Index . . . . .</b>	<b>165</b>
