Contents

1 Definitions of characteristic exponents and basic properties 1

2 Bounded perturbations 7
2.1 Stability of Lyapunov exponents 7
2.2 Two-dimensional system 11
2.3 Generalized spectral radius and subradius 18
2.4 Time-invariant system 20

3 Arbitrary small perturbations 23
3.1 Central exponents of families of sequences 24
3.2 Central exponents of linear system. Definitions and basic properties . 29
3.3 Central exponents of triangular system 32
3.4 Relations between central and Lyapunov exponents 34

4 Regular systems and regularity coefficients 41
4.1 Coefficients of regularity and basic properties of regular systems . . . 41
4.2 Grobman perturbation 44
4.3 Grobman perturbation for diagonal system 45
4.4 Characterization of regularity in terms of nonhomogeneous system . . 53

5 Perturbations exponentially tending to zero 61
5.1 Definitions and basic properties of exponential exponent 62
5.2 Formula for the Exponential Exponents 66
5.3 Basic properties of sigma exponents 70
5.4 Relations between sigma exponents and Lyapunov exponents 73

6 Stability by the Linear Approximation **77**
6.1 Preliminaries 77
6.2 Perron examples 78
6.3 Conditions for exponential stability 80

7 Perron exponents **85**
7.1 Numbers of Perron exponents 86
7.2 Formula for Perron exponent 89
7.3 Bounds for Lyapunov and Perron Exponents 93

8 Conclusion **99**
